<b>説明</b>			
<p>It would be useful to be able to encrypt passwords or other secret string in a wiki site, e.g. a server administration howto also documenting the login credentials. I think ia already saw this feature in media wiki, where secret stuff then is shown users without needed rights as **. When Logged in with needed rights to see "encrypted" strings, the * are repalced with the secret. It is important not to have the whole site encrypted, but the patz in between a .. Tag.</p>			
journals			
+1			
<b>This feature can be added to #2636</b>			
Check the plugin called - wiki-cipher			
it works on some older redmine versions (2.2).
