説明

Hi, could you allow user to choose different filters in report (tracker, spent time, estimated time, due date, resolution %, priority, subject, etc.) ?

In my factory, managers need the following indicators by week, month and trimester for each person and for each task :

- time spent,
- initial estimated time,
- % done,
- remaining time,
- due date,
- category,
- resolution,
- affected version.

That's why those filtered values are very valuable for managers who can follow activity by week or by month.

Thereby we can compile a kind of changelog between two revisions with filters "affected version", "resolution" and "category".

Thank you.
