説明 If I want to enable or disable a specific (maybe new) module truougout a entire redmine installation, I have to walk thru the entire bazillion of projects on by one. It would be a nice (and possibly not very complicated) feature to • include a grid of modules (horizontal) vs. projects (vertical) like the "permissions report" or • a list of projects using a specific module (like in the trackes configuration) that contains checkboxes to bulk enable/disable modules.
