説明 I've got a problem with a project repository setting in Redmine, in that; I've tried to set a repository with GIT, entered an invalid GIT path, and now I'm stuck as I can't seem to delete the path which has been set. Clicking delete sends me to the next page, stating that the following; Ideally I want to delete this repository reference, and put in a SVN repository instead. I've tried to rejig the system by taking out GIT in the Administration/Settings/Repositories panel, and leaving just subversion. However, this does nothing for the project's stuck GIT repository setting. Help! What file should I edit to delete these project settings? I'm a bit wary, as I don't want my project potentially corrupted.			
journals Error Message Recieved when trying to delete the invalid GIT repository setup; An error occurred when trying to access the repository; No such file or directory - git --git-dir "-/" branch Can you provide the exact error message, the eventual error in the logs, and the informations listed in [[SubmittingBugs]] ? Everything works fine on my installations when I try to delete repositories.. i have same problem. Actually i don't have git on my system and i am not using git. By mistake i put some directory text on repository settings and save it. Now i am not able to delete repository settings. When i click Delete button following message appear. 500 An error occurred when trying to access the repository: No such file or directory - git --git-dir "C:\Git-repository.git/" branch --no-color
