

Copy/Move an issue does not give any history of who actually did the action.

説明

If I go in and copy or move an issue there is no indication that I am the person who did the action.

- Activity - says the person who created the original issue did the move/copy.
- There is no note on the issue stating I copied or moved it from issue #
- The author is still the original person.

I can see the author staying the same but the Activity must state that who actually made the change and I would like to see a note automatically added that it was moved or copied.

This is a major issue when trying to track down who did what and why.

journals

+1

We've run into this bug too. Why is there a note field when this note gets lost?

Why is that issue not closed? Things to do?

Nothing to do. Should be fixed.

related_issues

relates,Closed,8239,notes field is not propagated during issue copy
