説明			
<p>The admin plugin's view doesn't support translations.</p> <p>Those fields right now are not able to be translated but they should.</p> <p>I've added I() function to the view so that can be translated at init.rb. I've attached a patch for it against the last Redmine version (r4410).</p>			
journals			
<p>This patch seems to break plugins that do not have translated name and description.</p> <p>Thanks for reviewing the patch :-)</p> <p>Yes, you're right, but I think those strings should be able to be translated always. At least, the description. I'm not sure if there is a easy and elegant way to translate just if there is a translation :/</p> <p>Can't it be added to the plugins documentation as a requirement for updating a plugin to the new Redmine version or create a new one? Just a thought...</p> <p>Thanks for your time.</p> <p>You could use something like this:</p> <pre>plugin.description.is_a? Symbol ? I(plugin.description) : plugin.description</pre> <p>A new requirement is not to be taken lightheartly. It could be optional (and/or recommended) though.</p> <p>Thanks Holger,</p> <p>I was trying with that solution and I got the patch I attech. No I have plugins with translations adn plugins without translations working.</p>
