説明

Redmine Version 1.0.4

I have versions which have Not shared set on them. This works correctly for things like adding new issues (I cannot add an issue to a version that is not shared with that project). However when I construct a view of an issue list which uses a project filter, the Gantt chart for that view includes all the versions across the entire install of Redmine regardless of the sharing settings.

For example:

Project 1 has Version 1 and Version 2

Project 2 has Version 3 and Version 4

If I construct a filter which says "All issues that are not in Project 2" I get all the issues filtered correctly but all four versions are shown in the Gantt chart.

I know that the Gantt rewrite for 1.1.0 is imminent but this issue seems like it should be fairly simple to correct (unfortunately I don't know Ruby well enough to understand how to do it myself). It looks like it just needs something added to the filter on line 32 of the gantt controller (

http://www.redmine.org/projects/redmine/repository/entry/tags/1.0.4/app/controllers/gantts_controller.rb#L32)

Is there any chance of someone looking at whether this could be fixed with a simple fix to the version filter, please?

journals

Using the latest 1.1 stable release, we see all versions on the build listed even though we set a filter to show just version 8.0.

I have created this patch for the gantt charts to hide the closed versions on the gantt.

This is a hard-coded fix. I'd like to know more about Ruby so we could add an entry on the main administration settings panel (or project settings panel) to provide a checkbox that says [] Hide closed versions on gantt.

Anyway - here is the patch:

```

```

        # Third, Versions
        project.versions.sort.each do |version|
-         render_version(version, options)
+         if !version.closed?
+           render_version(version, options)

```

```
+      end
      return if abort?
    end
```

Could someone try this patch at #7456 ?

Project filter fixed in r5077.
