We want to show national holidays and Sundays with a different color in the calendar so that the user knows it is a holiday.
I tried to use "holidays.gem" to do that but yet i couldn't succeed.
We don't mean to use schedules plugin or any, we directly want to change the redmine calendar.

journals

I think it's not something everybody would use. Maybe it would be a good idea to put it into a plugin which would change the default calendar behavior, don't you think ? I'd personally be interested in such a plugin, but have no time for implementing it now.

Thanks, you are right, it would be better not change redmine, but write a plugin. I changed redmine calendar a bit, and now i can see holidays in it. but if i have time i may try to do it by a plugin as well.

Any news on this?

Would be great also to import "read only" via ical web urls to show this dates in redmine calendar, e.g sundays and work free days .. etc

+1

A very good user case description copied from "forum entry":/boards/1/topics/20113

Objective
Provide the users with an ability to specify holidays and the application with an ability to determine working and non-working days

Motivations
There are several reasons to have multiple and customizable calendars in Redmine.

1. Accounting holidays is very important for project planning and activity tracking. Since holidays are country specific, the calendar should be customizable (at UI level) to accommodate local specifics
2. There are cases when some members or even entire enterprise or may work on a custom calendar (four-days week, for example)
3. Project members may reside in different countries and thus, working on different calendars. Therefore the application should be flexible enough to capture and track all these nuances.

Use case identification
In the scope of this module the following use cases were identified:

Create/Edit a calendar

Apply one or more calendars in the Calendar View

Apply one or more calendars in the Gantt View

List all holidays for a given year

Determine if a given day is working or no

Set a calendar for a member or a group

There is a ready to use railsapp baed on jquery called "full calendar":http://github.com/vinsol/fullcalendar_rails - see "demo": http://fullcalendar.vinsol.com/

Its nearly to google calendar..
" FullCalendar" provides a full-sized, drag & drop calendar. It uses AJAX to fetch events on-the-fly for each month. It also supports an intuitive interface to manage events that spans over multiple days or weeks. It is visually customizable and exposes hooks for user-triggered events (like clicking or dragging an event.

Could be used and embedded in redmine for appointment management, meeting schedule and holidays.

This is a plugin which adds an ICS feed link to the calendar view

We are proud to announce "Multi calendar plugin":/plugins/redmine_multi_calendar

could you add some screenshot?

Thanks

Is it announcing good idea, right before there is any download to provide or is there any repository/download ur will provide?

@Eugene Hutorny

Same thing here, you did not provide any link. Where to get the plugin?

I vote to remove this plugin entry so far there is no binary/repo availabe.

Link to the repo added,
Sorry for confusion, on Feb 13 we stuck with ssh authentication issue and therefore failed to submit repo same day.

Please add url "https://github.com/ksfltd/redmine_multi_calendar" as well/instead, for issues, overview, different git protocol sections.

Added https://github.com/ksfltd/redmine_multi_calendar as homepage
