<b>説明</b>			
Hi,			
We work with several branches on a git repo, but Redmine only seems to track changes from master branch. The problem is that our commit messages like: "Fixes #241"... do not work if they are created on a "develop" branch for example. Redmine does not "see" these commit messages, therefore it can't mark the bug as fixed.			
This seems to be a bug implementation of issue #1406			
Database version : Postgresql 8.3 git version: 1.5.6.5 Redmine version: 1.0.4			
journals			
The reason is Redmine parse only 1 week before the last known commit.			
See source:tags/1.0.4/app/models/repository/git.rb#L48			
This issue is related with #6013.			
For example.			
<a href="https://www.chiliproject.org/issues/214">https://www.chiliproject.org/issues/214</a>			
Redmine calls "git log --all --since='YYYY-MM-DD'" to fetch new changesets. at source:1.1.2/lib/redmine/scm/adapters/git_adapter.rb#L114 .			
If latest changeset in your database is "2011-03-30", Redmine calls "git log --all --since='2011-03-23'".			
I am curious: Do the commits you mentioned in #8256 for ChiliProject also go to Redmine? I am confused by how these two projects progress --- would they share most of the new changes?			
Fixed in r5788.			

related\_issues
