説明

It would be nice to have permission options to set who can see the members assigned to a project (in project overview). Ideally this isn't a on/off toggle but being able to select the roles.
Examples:

- project admins and project managers can see all members
- simple users only see the project admins
- non-members (on public projects) can't see any members.

journals

I agree, this is a critical feature for me too.

+1

+1

And maybe additional project setting to totally disable displaying of members.

Attached patch for 1.3.1 adding permission to view project members and show members option for project.

I forgot - above patch needs database migrate:

```
rake db:migrate RAILS_ENV=production
```

This will only reach trunk if you add some tests

Related to #6014.

+1 this is important feature, if for example company has lot's of users, and 1 product that all of them use. In some cases, users (Customer role for example) shouldn't know who other users are. Currently they are using workarounds... Additional's plugin is offering to

hide other users of the same role, but there should also be ability to hide all users (except the ones working on issue).

+1, I agree with @Aleksander Pavic.
