On revision page, you can change the revision id then click on the 'Ok' button to get to the new revision page.

If you remove the revision id field content and leave it blank then you'll get a HTTP 500 error.

Additional question (UX) : why is the 'Ok' button displayed on the revision page and not on the repository page ?

Tested with a SVN repo.

journals

This is ad hoc patch.

Git shows branches and tags list box.
https://projects.kde.org/projects/extragear/kdevelop/kdevelop/repository

But, I don't know the reason of no 'Ok' button.

Do you want me to test it ?

I tested in Subversion.

I will research other SCMs.

Fixed in trunk by r4703, r4704 and in 1.1 by r4707.

Hmm I'm using 4707 right now, and the issue doesn't seem fixed for me. I click the repository tab, click view all revisions, then in the "Revision: " I just click the ok button without entering anything, and up pops a 500 error.

r4707 will return a 500 status code indeed. Maybe we could simply redirect to the revisions list when no revision parameter is given.

I'm running r4709 and I get the same redmine 500 error I would get if I typed in a revision number which would not exist.

I don't have the Internal Server Error HTTP 500 any more (with svn, at least) so, as for myself, this issue is resolved.

Yes, it's a user friendly 500 error but still, it's a 500 error response (meaning "Internal Server Error": http://en.wikipedia.org/wiki/List_of_HTTP_status_codes#5xx_Server_Error) and this is not really appropriate. I think we should:

- response with a 404 when the revision that was entered was not found

* do a redirect to the revision list when no revision parameter is given

Sure, both looks like a (far for 404) better behavior.

500 error changed to 404 in r4711.

Fixed in trunk by from r4712 to r4714 and in 1.1 by from r4715 to r4717.

related_issues

duplicates,Closed,7332,Defect #7307 doesn't appear to be fixed
