説明

it would be great to have access to all enumerations via the REST API. Right now, at least from what I understood, I would have to get all issues and then hope that all Statuses/Resolutions are in there.

journals

This would be really useful.

+1

See #7180

This is duplicate of one or some of the following:

- #4968
- #7180

* #7402

I meant #7819, not #7402.

As #7180, REST-blocking for instances which don't set a default Priority, etc.

+1

We need this feature for "RedmineNB":<http://kenai.com/projects/redminenb> (NetBeans Plugin for integration with Redmine).

+1

Getting Enumerations is crucial

+1

+1

What's the status?

Candidate for Majorrelease 3?
