"Create and continue" should default issue fields to previous issue's values

When creating a bunch of issues, I'd probably like to file them to a same target. It would make sense to pre-fill not only Tracker, but maybe all fields with values of previously created issue - except for Subject and Description.

It makes sense to me to pre-fill:

- Assignee
- Category
- Priority
- Target version
- (maybe) Due date
- Watchers
- any custom fields

journals

Hi,

May be "Create and continue" should remain as is, and new button to be added: "Create from this":

- Create and continue - continues with blank issue

* Create from this - continues with new issue filled with the contents of the current one

@Ivan, why multiplying entities? Do you have a use case that reasons these two cases?

After some re-thinking, I'd say you are right. 'Create and continue' may create this issue and the open new issue with the data of this issue. If one want new blank issue, the he/she may press 'New issue' at the project menu.

when I click on "copy", some field-data get copied correct, but only Status "New" and the actual Status of the base-issue is selectable.

when selecting "Create and continue" the appearing issue-edit-form has all status selectable, but no field-data from the base-issue is copied - which would be the expected behavior, when continuing the copy-function.

I'm using following environment:

- Redmine version   2.3.1.stable
- Ruby version   1.8.7 (x86_64-linux)
- Rails version   3.2.13
- Environment   production

* Database adapter   MySQL

I would like to see this too.

I get around it by setting the fields I want to preserve in the GET parameters of the URL before I submit an issue, so for example:

my-redmine.com/projects/my-project/issues/new?issue[assigned_to_id]=3&issue[fixed_version_id]=15&issue[tracker_id]=2&issue[parent_issue_id]=255

Then after submitting the issue, I press the browser's back button to get back to the above URL so I can enter another issue with those same fields pre-filled.
