説明			
<p>In bugzilla, we can ask for reviewing as patch: generally speaking an attachment can flag as "patch" and in this case the engine enable a flag to ask a review to project owner. The project owner can reject the patch (review-) or approve the patch (review+). It's great if redmine could be this in some way: add flag to attachment to make attachment "patch" and enable for "patch" flags to ask /accept /reject reviews</p>

I dont know well git behavior. Surely my english don't help you(:-) : see an example on https://bugzilla.mozilla.org/show_bug.cgi?id=468808			
I think that in a production environment this is an essential feature: if I'm the owner of a project and some collegue create a patch, it's very important to communicate with him with flag: review+, riview- (of patch).			
Priority should be High and not Normal			
xref bug #469 and bug #2048
