**説明**

I have no clue why it is not working.

email notification for regular tickets is working fine.

In administration > settings > email notifications both "Wiki page added" and "Wiki page updated" are checked.

I am watching a wiki page, but when the wiki page is updated, no notification is sent out.

We are running Redmine 1.1.1, but the problem existed already before.

in the logfile there is a statement that it is sending an email, but the recepiant list is empty. (I replaced some text with xxxx)

```
Processing WikiController#update (for 10.10.174.40 at 2011-03-04 16:34:37) [PUT]
  Parameters: {"commit"=>"Save", "project_id"=>"all", "action"=>"update", "_method"=>"put", "authenticity_token"=>"xxxxx", "id"=>"1", "Wiki_test", "content"=>{"comments"=>""}, "text"=>"h1. Wiki test tttt", "version"=>"5"}, "controller"=>"wiki", "attachments"=>{"1"=>{"description"=>""}}}
```

Sending email notification to:

Redirected to https://xxxx/redmine/projects/all/wiki/Wiki\_test

Completed in 94ms (DB: 47) | 302 Found [https://xxxx/projects/all/wiki/Wiki\_test]

---

fyi: we run redmine as a sub-URI. Can this be the cause ?

No.

What do you find in log if you don't check the "Use bcc" option (in administration / e-mail notification) ?

this setting is not checked. see screenshot attached.

We have exactly the same problem.

When you create a task, assignee doesn't receive the notification. But when he is added to the "watchers", he can receive notifications.

When this problem will be solved?

This is very critical for out company :(

We have exactly the same problem.  
When you create a task, ...

This is not the same problem ; you are talking about issue notification, which is a bit different from wiki notification.

Your issue can be related to a missed db migration, have a look to #7451.

A lot of thanks!
