説明 I have a rather strange request from a Customer and am wondering if there is already a patch for this somewhere (since I suck at Ruby). The basic Idea is that the category a ticket is in determines it's Priority. I can hide the Priority from the form so users can't set that. But I somehow need to assign the priority based on what category is selected. It would require extending either the data-model, or hacking directly into issues.rb with some before_create method and a switch statement on my categories. Is there an existing patch out there for this? Because I am tempted to simply hack this into issue before_create, but then I'd had to make sure it only runs on this one project etc.. journals I think I fixed the issue myself. Attached you can find my patch that does this pretty much in the same way as assign_to is being handled Unfortunately I am a complete stranger to Rails so I really didn't know how to effectively write a test for this.. (it's all magic!) but from my testing so far it works. greetings Daniel Git repo to pull this change from: https://github.com/tigraine/redmine/tree/category-default-priority +1 Anyone can think of any alternative? related_issues duplicates,Closed,21224,Assign a priority to a category
