説明

We have a taks that raises following error if we try to access it in any way (edit, view, history, context menu in issues list view). The issue although is correctly listed in issue list view, and all values get displayed. We are not sure, since when that raises, but the issue was moved between projects in history, that is what we can remember, although that don't have to be the cause for that error.

How can we acces that issue again, or at least remive it completly

NoMethodError (undefined method `closed?' for nil:NilClass):

journals

Can you give the output of the following commands in a @ruby script/console production@ (after replacing 1234 by the real ID of your issue) :

```
Issue.find(1234).relations_to.each{|ir| puts "#{ir.relation_type} => #{ir.issue_from_id}"}
```

EDIT: fixed the code... please try this new one-liner instead

Result is..

```
>> Issue.find(84).relations_to.each{|ir| puts "#{ir.relation_type} => #{ir.issue_from_id}"  
blocks => 971  
blocks => 972  
=> [#, #]
```

Tx for help!
