説明

I have Redmine 1.2.1 and I have problems when I try to add a related issue to a issue. When I do Redmine shows a dialog and asks for username and password, I write them and does not work, the workaround is put in the first login redmine form the option remember password activated.

Another possibility ?

Thanks

journals

Localizable plugin	0.1.1

I am having a related issue in that trying to add a "related issue" caused the login dialog to pop and even it canceled logs the account out that was logged in. I am using todays svn and the ldap login for auth.

It looks like it has something to do with one of these change sets based on the timing.

6184 2011-07-05 18:47 Jean-Philippe Lang Makes relations resource shallow (#7366).
6179 2011-07-04 19:44 Jean-Philippe Lang Adds support for GET on /issues/:issue_id/relations (#7366).

6176 2011-07-04 19:03 Jean-Philippe Lang Adds REST API for issue relations (#7366).

It's true whit this modifications this bug is solved

Luis Serrano Aranda wrote:

The 3 modifications listed by Erik solved your issue ??

Bad news, this bug is not solved with this modifications

Luis Serrano Aranda wrote:

Yes these modifications are presumably at the origin of the bug, if ever.

I had the error before it is modified

Did you get the error just after you upgraded your version to 1.2.x ?

Yes

Then maybe you should check that your @application.js@ is up-to-date by clearing your browser cache.

I have the same problem, but not in Redmine.

I installed an plugin, and when I open the page in the plugin, I found this error.

anyone knows why? How to fix it?

Thanks.
