説明

I have a custom field defined as integer that accepts values between 1 and 100 and has 100 as default.
Today I have installed redmine 1.2.1 and for all issues that was submitted before creation of this custom field, I haven't value =100 (as in previous version of redmine) but I have the field empty.

This is a regression.

journals

Are you sure that the default value was set for already existing issues in previous versions ?

Surely: do you want a screenshot?

Can not reproduce. The default value for an integer custom field is present on the new issue form.

Jean-Philippe Lang wrote:

The issue isn't related to new issue form; for example, if I have an issue that was submitted before that I have created the custom field, with previous release querying issues via *REST API* I see an xml like this (note 100):

2011-02-11T20:43:52+01:00
2011-02-11T20:43:52+01:00

with last release I have that the custom field is empty (note for the same issue)

...

Also if I see the issue via browser, now I see the custom field empty, while before I see the custom field with default value;

I hope now is clear.

Ciao.

Yes ?

Etienne Massip wrote:

Yes ?

Ok?

We recently upgraded from .96 to 1.2.1 and are experiencing the same problem. Custom fields are no longer using the defined default values when issues are moved to projects without the same custom fields, as they were in the previous rendition.

This doesn't seem to be related to this issue. I think it is rather by design since in the new project the custom field is not available, thus it hasn't a default value.
