**説明**

Since the begin, I have configured my mercurial repos using mercurial\_adapter.rb (and not configuration.yml that isn't in use on my server): all have worked fine. But after the upgrade to 1.2.1 I have an error (see attachment:bug-in-action.png): I suppose that this error is raised by the double-quotes over hg: if I delete the quote and hit the same command via terminal all work fine.

**journals**

All SCMs use same logic, such as "svn", "git".  
I tested on MingW Ruby, and I don't use Bitnami.

I can't reproduce.

Try set "hg.exe" in configuration.yml.

I have installed the mercurial-python release for Windows and not tortoiseHg as suggest in configuration.yml... and I don't want to install tortoiseHg into my server: another choice?

As I described at configuration.yml, "hg.cmd" does not work.

There is only Mercurial Windows installer.

<https://bitbucket.org/tortoisehg/thg-winbuild/downloads>

I have used [1] <http://mercurial.selenic.com/release/windows/mercurial-1.9.win32-py2.6.exe> until redmine 1.2.1 release, and all

work fine (without use of configuration.yml);

Now, with your suggest, I have also installed [2] <http://mercurial.selenic.com/release/windows/mercurial-1.9-x86.msi> and repos return to work (without use of configuration.yml but mercurial\_adapter.rb): in conclusion after redmine release 1.2.1 it seems that I need to install both [1] and [2] to work with repos.

Thanks for your attention: maybe now we can close this bug as Worksforme
