説明 In Redmine 1.2.1 dev, there are issues visibility setting in "Administration" -> "Roles and permissions" with three options. All issues All non private issues Issues created by or assigned to the user Assume in a project we create a new role as "External users" and grant this role the issues visibility as "Issues created by or assigned to the user". The "external" user can't see issue assigned him but he's able to access it. Defect#9199 is very similar issue but not the same			
related_issues relates,Needs feedback,9199,Hide the issues in issue list for those users with role's issues visibility set as "created by or assigned to"
