**説明**

journals

r7880 lets you retrieve issue categories using: GET  
/projects/id.xml?include=issue\_categories

Done in r7882. See [\[\[Rest\\_IssueCategories\]\]](#).

Not sure that the @:shallow => true@ is effective here (in r7881) since it is designed to apply to nested resources.

I already had a doubt for project news.

I don't get it. Categories are nested resources, aren't they?

The @:shallow => true@ shortens the url for a category (eg: @/issue\_categories/5@ instead of @/projects/foo/issue\_categories/5@).

The @:shallow => true@ shortens the url for a category (eg: @/issue\_categories/5@ instead of @/projects/foo/issue\_categories/5@).

I guess you're right, I didn't make any test on my own; I guess I've been fooled by RoR documentation example where @:shallow@ option is set at parent (project) level.
