説明			
Hi,			
The issue board is very nice to use. Now I am trying to use typical project management functions.			
Your gantt view is simple but useful. But for ressource management a 2nd view would be useful.			
All Issues filtert grouped by assigned user.			
This is possible in issue list. Changing to gantt there is only the filter available.			
It would be nice to have such a feature.			
So you are able to see all filtered issues (and its relations) of a all users sorted by assigned user			
journals			
In the gantt view it also would be nice to have an quick and printable information about the assigned user (configurable, cause not everybody has this need).			
Hi, can you guide me about redmine using and specific guide about Gantt?
