### 説明

I have been using redmine together with subversoin. My redmine is 1.3.0 and subversion is 1.7.1. My OS is ubuntu 10.04.

Everytime I click on the repository tab, it hangs for a very long time and then responds afterwards ( slow display of 'repository' tab for huge repository ) . I thought that this was just initial but it happens everytime I click the Repository tab.

You can clone the repository using this line if you want to reproduce/test:

svn: <http://192.168.121.133/redmine/projects/test1/repository>

It took me 17s to display EVERYTIME.

journals

If I use

```
svn ls http://dev1257.googlecode.com/svn/trunk
```

it took 4s.

As for [https://ja2svn.dyndns.org/source/ja2\\_v1.13\\_data/GameDir](https://ja2svn.dyndns.org/source/ja2_v1.13_data/GameDir)

## Redmine 1.3.0 fails to show the list everytime

Any plugins installed?

Some are known to misuse Redmine code...

Etienne Massip wrote:

Any plugins installed?

Some are known to misuse Redmine code...

Nope.

## Have you tried the link above?

Andy Sun wrote:

Have you tried the link above?

Do you mean [https://ja2svn.dyndns.org/source/ja2\\_v1.13\\_data/GameDir](https://ja2svn.dyndns.org/source/ja2_v1.13_data/GameDir) ?

Then yes, and it displays well, but what's the relationship with Redmine?

---

Ok, my bad, forgot that svn was rendering HTML.

I mean

You can clone the repository using this line if you want to reproduce/test:

svn: <http://192.168.121.133/redmine/projects/test1/repository>

It took me 17s to display EVERYTIME.

As for [https://ja2svn.dyndns.org/source/ja2\\_v1.13\\_data/GameDir](https://ja2svn.dyndns.org/source/ja2_v1.13_data/GameDir)

Redmine 1.3.0 fails to show the list everytime

If you test the links above in Redmine Repository, how long will it take you to display

Do you have REXML parser errors in you @production.log@?

for <http://192.168.121.133/redmine/projects/test1/repository> everything works fine except for slowness.

for [https://ja2svn.dyndns.org/source/ja2\\_v1.13\\_data/GameDir](https://ja2svn.dyndns.org/source/ja2_v1.13_data/GameDir) in log there is:

```
Processing RepositoriesController#show (for 192.168.121.1 at 2011-12-15 22:25:29) [GET]
```

```
Parameters: {"action"=>"show", "id"=>"test2", "controller"=>"repositories"}
```

**Error parsing svn output: #**

It's because @"svn" list --xml "[@HEAD](https://ja2svn.dyndns.org/source/ja2_v1.13_data/GameDir/Data/Anims//)  
--no-auth-cache --non-interactive@ is returning

```
<?xml version="1.0"?>
```

```
svn: OPTIONS de 'https://ja2svn.dyndns.org/source/ja2_v1.13_data/GameDir/Data/Anims': Server certificate verification failed: issuer is not trusted (https://ja2svn.dyndns.org)
```

You have to configure properly your @svn@.

---

You're right. But that's not my main concern.

My question is

You can clone the repository using this line if you want to reproduce/test:

svn: <http://192.168.121.133/redmine/projects/test1/repository>

It took me 17s to display EVERYTIME.

If you test the links above in Redmine Repository, how long will it take you to display.

**I think it is to slow**

**I can't reach this system, it looks like a local network address?**

My fault---

I copied the wrong IP...

<http://dev1257.googlecode.com/svn/trunk>

Got the same ParsingException issue:

```
Error parsing svn output: #
```

Etienne Massip wrote:

Got the same ParsingException issue:  
[...]

Mine works fine. So maybe this is your connecting problem.

Anyway, my point is Redmine Takes Too Long On Large Subversion Repository

And all the links I give are just examples. If they don't work, you can create similar repositories to represent this problem

This is something more often observed with git repositories, how much time takes the @"svn" list --xml "[@HEAD](http://dev1257.googlecode.com/svn/trunk) --no-auth-cache --non-interactive@ command to complete?

Andy Sun wrote:

If I use

```
svn ls http://dev1257.googlecode.com/svn/trunk
```

it took 4s.

As for [https://ja2svn.dyndns.org/source/ja2\\_v1.13\\_data/GameDir](https://ja2svn.dyndns.org/source/ja2_v1.13_data/GameDir)  
Redmine 1.3.0 fails to show the list everytime

And @"svn" list --xml "[@HEAD](http://dev1257.googlecode.com/svn/trunk) --no-auth-cache --non-interactive@? =)

Etienne Massip wrote:

And @"svn" list --xml "[@HEAD](http://dev1257.googlecode.com/svn/trunk) --no-auth-cache --non-interactive@? =)

I tried, and 66% chances I got this:

```
svn: OPTIONS of 'http://dev1257.googlecode.com/svn/trunk': could not connect to server (http://dev1257.googlecode.com)
```

and 34% chances I got the list(a long list not suitable to paste here)

When I got the list (34% chances), it took 4s to show
