I'd suggest to equalize the way how available shared versions are differentiated in target version drop-downs since they differ between issues/new and issues/index. See the following screenshots:

¦ issues/new ¦ !tv_issues-new.jpg! ¦
¦ issues/index ¦ !tv_issues-index.jpg! ¦

I'm happy with either one as long as long as we're presenting a consistent UI.

journals

Fixing ugly typo.

Fixed description:

- Placed screenshots in table to seperate them better, and reordered them;

* Changed "constant UI" to "consistent UI".

Make all version fields be presented similarly to the Target Version field (grouped by project name).

Also, take into account that the project name alone does not say much, if the project is in hierarchy with other, similarly named projects. Parent project names should be prepended to the project name.

You can test this and see that version management is impossible in Redmine once there are multiple hierarchy levels and trees.

I just tested this case with the 3.4.4 version of Redmine and it doesn't seem fixed. Custom fields displayed as a list with the Version format aren't prefixed with the project name when issue is edited so you can't distinguish between two versions having the same name but owned by different projects.

+1
Same situation as describe by Gred Burri :

See #28865
