<b>説明</b>			
Hi,			
I think that would be great to have a real-time collaborative editor wiki that many people could work at same time together like google docs. There are few open source software that implements it with the operational transformation algorithm. It would help a lot who works inside big projects.			
journals			
+1			
I think this would be a great feature!			
This is dupe of #3921			
I have been looking for some solutions, I found a javascript library which could add this feature using Operational Transformation but it would require a node.js server. It is simple to use and can be found at <a href="http://sharejs.org/">http://sharejs.org/</a>			
Would be great to integrate live editing in Redmine Wiki.			
There is also another real-time wiki located at <a href="http://tidalwave-demo.herokuapp.com/view#/Welcome">http://tidalwave-demo.herokuapp.com/view#/Welcome</a> with the source at <a href="https://github.com/MisterTea/TidalWave">https://github.com/MisterTea/TidalWave</a>
