Because in the workflows columns and line headers are included in the scrolling area, they are lost in the table area when there are a lot of statuses (this is often the case).

It could be helpful to remove empty columns and lines, *when Only display statuses that are used by this tracker* is checked.

This will help to make the workflows quite more readable.

journals

Here is the corresponding patch agains more or less the 1.4 version.

See my previous issue #10481

Any news on this?

Unfortunately this patch has not been reviewed by the core team.

It is very useful in our company, because the number of statuses lead to an almost unreadable page without this modification (wide page, where we must use scrollbars).

Hi, this patch is very useful for companies with a more or less extended workflow.
Can it be reviewed ?

If needed I can provide a patch towards the last stable Redmine.

The view code has not changed for a while, so the patch is still OK.

Any chance that this patch can be integrated ?
