説明

It would be nice to get the issue-id "while" entering it via a placeholder.

E.G.:

Tracker: Patch
Subject: Implementation of feature foo (branch user/#ID#-feature-foo)

Redmine should exchange the #ID# with the issue-id when it stores the issue.

Result:

Subject: Implementation of feature foo (branch user/589-feature-foo)

Right now there is the need to change the subject right after entering an issue to set the branchname correct.
