説明 I believe this can be an extension to the current source syntax of the wiki. For example : source:src/test/java/pkg1/MyClass.java#L20_L30 OR Lines 20 to 30 from MyClass.java appear here. Would result in line 20 to 30 embedded as a @< code >@ section in the wiki. This comes in handy when referring to code sections throughout a design document. Of course, referring to specific commits is much more reliable to always retrieve the same set of lines. What do you think of this ? Do you have an another idea to achieve the same thing ?
