説明

here: <http://www.redmine.org/settings/edit?tab=general>

Option 'Host name and path'

Setting.host_name automatically sugested as @guessed_host_and_path

My suggestion:

change hint from 'example: XXX' to 'leave blank to use: XXX'

also set default valule to black instead of 'localhost:3000'

journals

as i understand there are no problem to autodetect hostname cause code do this already.
This issue allow to autoseup redmine instance so it will be easy to use. Do you disagree?
