It´s very common to edit wiki contents, and forget to include comments about that wiki revision. It would be nice to be able to edit the comments for revisions that are already saved. It´s useful to keep track of wiki changes.

+1

We have a large group of folks who use the wiki for internal documentation and they frequently forget to add comments for wiki edits. Having a setting at the Admin level to enforce the use of comments would really come in handy.

+1

This is a feature I'd really appreciate for history documentation.

(I always thought "annotate" means exactly this: enter a comment for an existing version of a wiki page. Quite a misleading term...)
