**説明**

When managing a large number of projects this gets unruly quickly:

!Before.PNG!

So we replace it's rendering method with nearly the same one for the project page:

!NewHierarchy.PNG!

journals

This also means it should be affected by this bug: #11508, but that is a problem with the project being updated.

Any chance this can get marked for a future release?

Checking the parent project checkbox could make think that notifications from child projects will be sent too, don't you think so?

Etienne Massip wrote:

I would argue that it doesn't, any software I use that behaves like that checks and disables child boxes, but if it could be interpreted that way we should make it clear...

- Notify the user in the section below that says "For unselected projects..." that parent projects don't cascade to child projects.
- Just sort alphabetically, which doesn't work well when project names are ambiguous between different hierarchies of projects.  
\*\* For example: "Webservices" under "Project 1" and "Project 2"
- Sort by project hierarchy, but display with breadcrumb trails instead of parent/child hierarchies.

For example:

- Project 2
- Project 2 > Test 2
- Project 2 > Test 2 > test4
- Test Project
- Test Project > test 3

Really it would be nice to have some sort of a solution, I know running some 20ish projects at work this gets to be a mess for

people with higher level privileges.

Any opinion on this?

Nice to have indeed.

Fix committed in r10189 with a bit of refactoring in r10188 to avoid code duplication.
