説明

I have install the redmine 2.0.3 and git on Centos server.

The redmine directory and the git repositories directory's owner is apache.

If I create a project on the git, the redmine can find the file and change history of it.

But when i click the "diff" button , the redmine give a internal error.

From the production.log , I got the following messages:

```

I added the three repository and they do not work with the same problem (see log)

Please give more details and read [\[\[SubmittingBugs\]\]](#).

This operation is tested.

Try to clean your cache with `@rake tmp:cache:clear@?`

If it doesn't work, you can try to replace `@<% cache(@cache_key) do -%>@` with `@<% cache(@cache_key, nil) do -%>@` directly in the code.

```
<% cache(@cache_key, nil) do -%>
