説明

Validation errors should be displayed if the "Parent task" value is non-numeric value.

journals

Fixed in r10615.

Sharp issue id number (e.g. #11979) validation does not work.
This functional test fails.

```
def test_post_create_subissue_with_sharp_parent_id_validate
  @request.session[:user_id] = 2

  assert_difference 'Issue.count' do
    post :create, :project_id => 1,
                :issue => {tracker_id => 1,
                          :subject => 'This is a child issue',
                          :parent_issue_id => '#1'}

    assert_response 302
  end
end
```

Fixed in r10658.
