説明 Hey there, I just tried to upload a userdefined profile picture in our intranet-system. It seems, that Redmine doesn't support this feature. The only way to integrate it, is to define a gravatar account with my business mailadress, which isn't the best way i think. My other option is to integrate this Plugin: http://www.redmine.org/plugins/redmine_local_avatars But this seems fairly outdated. It would be great to have this feature out of the box integrated. Best regards			
journals Feature #13536 asks for LDAP Avatar, in addition to a Local Avatar. There is also "Local Avatars Plugin": http://www.redmine.org/plugins/redmine_local_avatars_003 although it too is for Redmine 1.0.
