<b>説明</b>			
<p>Redmine has a very form based (flat) view on issue and work task managemnt what is very liek standard web based application and based on model relations one step beyond every enitivity.</p> <p>For real there is a wide spread network ad graph of dependecnies and relations of issues which shall be visualized and browsable in a more intuitive way. Just compare excel bases brain storming with a mind map.</p> <p>Such "mind map" visualization would be useful for redmine also, although i think it is ok to be readonly in the first thorw with shortcuts to existing for based edit masks.</p> <p>A picture says more than 100 words, so see below my picture how such a network/graph could look like. It makes dependencies much clear because you can look x step beyond the issue you goonn change. A nice idea would be able to configure the amout of "issue hops" to traverse in the direction you can filter by issue relation typ.</p> <p>!Visualize IssueContext.png!</p>

Uhm Terence? Was this expected? This link references to this ticket. ;-)			
Fixed!			
+1 It very useful when i use Jira. So, i want this feature in Redmine!
