説明			
It would be very nice, if I can configure custom fields so, that other users can add values while they are creating new issues. Like we can just do it with issue-categories.			
journals			
This is in part related to #6717 which talks about dynamic listing of CF; though not completely same.			
+1			
+1			
+1 - it would be perfect to have possibility for List custom value with multiple values - to be edited by users (values per specific project or project tree) (maybe similarly as issue category with role permission "manage issue categories", but with multiple values.			
+1
