説明

It would be useful to have something similar to the github API which gives 3rd parties tools the ability to send notifications about the current CI build status of a merge request. In the case of Redmine I propose to add the status for each linked commit.

journals

Well, this seems more likely a plugin request?

Have you noticed <http://wiki.hudson-ci.org/display/HUDSON/Redmine+Plugin> ? Just for example.

not really a plugin request, I was suggesting to add an API similar to the GitHub's one. I don't see the point for having a plugin for this feature

Ah okay, you mean to set some commit fields via REST?

Hm... well I associated your request to some system like forge.typo3.org with the CI integration.

"This":<https://github.com/blog/1227-commit-status-api> is an example of the GitHub API
