説明			
<p>I have to implement a software which moves issues, comments and files from a proprietary bugtracker to Redmine. Due to complicated dependency issues, I have to implement this remotely from Redmine, thus using the REST API.</p> <p>The API is just fine except for one feature : I would like to be able to create the issues and comments with their original creation date, not using the NOW time of the API call. What do you think about this possibility ?</p>
