説明

I just met the problem to do a thousands click when i want to have many version status set in one step. It would be great to have a similar javascript context menu for version view like we have for issues. Especially the status attribute but also a bulk edit form for beeing able to apply attrib changes /custom and standard fields) to all versions then would be very useful.

journals

Similar to the issues, you could be bulk edit status and sharing or bulk delete from the context menu of the versions list (Project > Settings > Versions).
