説明

On the Repository page I click [+] near the @trunk@ folder and while loading is processing I click [+] near @branches@. After both loadings are finished I have this:

```
branches
|-branch1
|-branch2
|-file1
`-file2
tags
trunk
```

instead of this:

```
branches
|-branch1
`-branch2
tags
trunk
|-file1
`-file2
```

As you can see, loading result appeared in the last chosen folder, not in the appropriate one.

journals

Looks like we just use global variable instead of local one:

```
function scmEntryClick(id, url) {
-   el = $('#'+id);
+   var el = $('#'+id);
    if (el.hasClass('open')) {
        collapseScmEntry(id);
        el.addClass('collapsed');
    }
}
```

Patch included.

Committed in trunk r12274, 2.3-stable r12275 and 2.4-stable r12276, thanks.
