説明 Dear Redmine Team, How can I add a custom auto number field for a project: Ex: Project 1, issue 1. This is a custom field only but has an increasing & auto suggest number per project. We can change this number. I think this will be a custom field and it will show a suggestion number. Of course, it may be duplicated if two issues are created in the same time or we move issue across projects. I know my opinion is related to #5765, #282, #538, #1926, #3843, #7873, #8039

Interesting, but how/when will the custom field number get incremented? Hi, It will get the largest number in project and plus one. I think it just a default value and it can be change or if some one move a issue to another project, it will default get a newest number. Sorry for my English	
+1 Thats great! I just created my planned Inventory module almost entirely by using Custom fields / Dedicated tracker / Dedicated statuses etc. Only thing I'm missing is the auto-increment functionality, which will solve (almost) the rest. Btw it can be done by new datatype or by adding "[x] Auti increment" checkbox to Integer datatype. And of course, "[x] Unique" will be helpfull - goint to check tickets for this.	
Hi All, Take a look at this plugin: http://projects.andriylesyuk.com/project/redmine/issue-id But it is still developing. I think this plugin is wonderful. Regards,	

+1

This is fantastic idea.

We are using additional number as a customer facing issue id, would be great if this would be maintained automatically inside redmine (now we are manually assigning the number verifying that there is no conflict...).

FYI: "Redmine Serial Number Field":

https://github.com/matsukei/redmine_serial_number_field/blob/master/README.en.md

plugin may be useful for you all.

Hi, i am thinking on install the Redmine Serial Number Field plugin in order to hava number for my projects.

If i install this plugin what happen with the previous projects?

Thnks!
