Collapsed with @collapse@ macro sections don't have an edit link. More than this, all following edit links don't work properly, because service-side numeration take into account all sections, even collapsed, but client-side doesn't.

journals

I can't reproduce the " more than this" part.

Considering the first part. Here is what we have in @app/helpers/application_helper.rb (line 527)@:

```
macros = catch_macros(text)
#...
parse_sections(text, project, obj, attr, only_path, options)
```

@catch_macros@ is a mutator; all instances of @{{ macro ... }}@ in @text@ are placed with @{{macro(N)}}@, so there is no chance @parse_sections@ can see @

...@ inside. I don't know whether it was made on purpose or not, but I believe you can *reject this issue*.

It happens to me as well (the part before the "more than this").

Is there a reason you suggested rejecting this issue?

It's not exactly a bug, it looks more like a feature.

Maybe an unavoidable behavior, but a feature?
If there are sections inside a collapser, why shouldn't the user be able to edit them?
I think it's best if the formatter treats the collapse as a section. That way you can edit the entire collapse, or any section within it, same as you would any section.

Yeah, it would be perfect and natural, but unfortunately macros are just not made this way.
