Hi,

I am looking for a datetime field and observed that Jquery datetime UI control is being used. Would it be possible to replace that UI control with another version which ships with Date and time. I found one JQuery Datetime Picker control on web.

journals

This is more likely a feature request.

Any one can advise for this???

Do you want just another UI control or you want a date + time picker? If it's the functionality you are requesting this issue is a duplicate: #5458

I am looking date+time picker ccontrol.

With reference to issue #5458, it is a patch to show time field which is not working; As i believe it is for the older versions of redmine and it will not be applicable for newer versions. Hence I thought of using different version of Jquery UI DATETIME PICKER control, would it be possible to replace with another version of control?

Hello All,

I am eagerly waiting for your advises.

Thanks in Advance
