説明

I configured a new Issue Custom Field (with Date format) and I need to filter issues by this field where its value is overdue (less than today). I applied the filter type "more than days ago" with value "1 days" to this field and the query returned the overdue issues and issues with NULL value. I need only the first one, without the null values.

Applying the same filter to a native date field (like due date) the result is exactly the expected (only the overdue issues were listed, without null values).

journals

Fixed in r11850, thanks for pointing this out.

Merged.
