説明 Hi there, this is a small patch, which should provide the possibility to configure the OpenIdAuthentication.store. This throws many warnings and spams the log-file on each start. Message: OpenIdAuthentication.store is nil. Using in-memory store. There is also a discussion about this here: http://www.redmine.org/boards/1/topics/35523?r=37706#message-37706 About the Patch: Added a new initializer which initialize the Store with a environment setting, if this isn't preserved, he loads a default value. Added two demo configurations to the environments production and development Best regards, Daniel			
journals Very good, this message keeps bugging me... How about this patch? +1 works for me too. fix typo. Committed in trunk r11849, thanks.
