説明

As of 2.4.0 the issues in the Gantt will be sorted by start date instead of lft/rgt (implementation of #7335).

In my opinion - as an extension of that - it would be very helpful if there was an option in the Redmine settings where the user/admin can configure which kind of sorting shall be used to display the issues in the Gantt (either by lft/rgt or by start date).

May it be possible to implement that?

journals

One reason why we should not disable the sorting by lft/rgt is that some day we could extend Redmine by a manual sorting functionality based on the lft/rgt values (the awesome nested sets already offer the "move_left" and "move_right" methods which could be used for this).

Why not using the existing sorting-system for tickets also for gantt? It's very powerful as one can even save queries.

Any progress on this one?

2.4 feature freeze

I think this feature need to include in version:2.4.0 because #7335 changed sorting.

Yes, that would be usefull. For now, I prefer to have only one sorting method.

+1
