説明			
<p>When the session timeout is set and a user leaves an unsaved form for a while so their session expires and clicks on the <u>Save</u> button, they is redirected to the login page and all unsaved data from the form just being edited are lost.</p> <p>The same frustrating situation can happend when you write a long wiki page.</p> <p>The flash message on the login page does't help to recover lost data.</p> <p>I thing that the user should be warn before data are lost.</p> <p>Please take into account the attached simple patch that add a Javascript popup message with the warning text about session expiration.</p>			
journals			
<p>I guess that the patch won't work if redmine is installed with a sub-URI.</p> <p>Also, won't the heartbeat request reactivate the session?</p>			
<p>I guess that the patch won't work if redmine is installed with a sub-URI.</p> <p>I've removed the slash in route.rb:</p> <pre>-get '/session_heartbeat', :to => 'application#session_heartbeat' +get 'session_heartbeat', :to => 'application#session_heartbeat'</pre> <p>Also, won't the heartbeat request reactivate the session?</p> <p>I don't think so. I skip the reactivation in session_expiration method:</p> <pre>def session_expiration + # Skip session heartbeat + return if ((params[:controller] == 'application') && (params[:action] = 'session_heartbeat'))</pre>
