説明

I have a page with a thumbnail of an attached image. In the wiki it shows correctly:

p=.

マクロ **thumbnail** の実行中にエラーが発生しました (添付ファイル Project_Report_JN_0925_1025_2013.png が見つかりません)

When I export this as a PDF it looks like this:

attachment:Project_Report_JN_0925_1025_2013.pdf

The HTML export does it wrong too (it adds a link to a file with absolute path *and* the attached file is not downloaded!)

attachment:Project_Report_JN_0925_1025_2013.html

journals

My image link seems to be wrong above. So here again:

!Project_Report_JN_0925_1025_2013.png!

Even if I don't use the thumbnail macro like this (works in the wiki-view):

p=. !{width: 600px}Database_legend.png!

It does not work:

attachment:Project_Report_JN_0925_1025_2013-3.pdf

Even the standard export of Safari looks "better" (has the image):

attachment:Project_Report_JN_0925_1025_2013_safari_export.pdf

I have fixed the description. You were using a reference to image "Database_legend.png" while you've uploaded "Project_Report_JN_0925_1025_2013.png". You can see that when using the correct filename it's possible to make use of the thumbnail macro here on redmine.org.

Are you able to edit your note-1 to remove the duplication of the image?

Also, this not only applies to wiki page pdf export but also to other pdf exports, esp. like issue pdf export. So I've changed the subject to be more generic.

I'll change the tracker too. This hasn't been part of any (public) design or whatsoever for the implemented pdf export features as far as I know.

I couldn't edit my post, I knew that I did something wrong with the name of the file (that's why I posted it again). But using the thumbnail feature seems not to work in the tracker: during a 'save' it says that the macro is not available, but with !! and the {width=600px} css it worked. But this would be another bug, wouldn't it?

Is there any update on this i have the same issue.

+1

Is there any solution to this?
