説明 Related to #13242. CSS for - and - tags in #sidebar spoils our plugin. I suggest to add a special class for - elements that need zero margins.	
journals Well, I don't get the point what breaks your plugin. Do you use a ul/li inside the ul/li of the sidebar? Maybe it would be enough to change #sidebar ul to #sidebar > ul Yes, the plugin imports a tree structure into #sidebar. Well, it has a very complicated css rendering by js. I only suggest, I do not insist. Can you try to change <pre>@ #sidebar ul @ to @ #sidebar > ul @</pre> and <pre>@ #sidebar ul li@ to @ #sidebar > ul > li@</pre> I think this should do the trick and we don't need to add another class to the css. :-) Do you mean in application.css? If so, it will not, whereas there are 's situated in and only after that in in some places.
